# UV-LED DISINFECTION – POINT-OF-USE APPLICATIONS

- UV LED is new technology
- Advantages compared to conventional mercury lamps
- No mercury
- On/off operation
- Immediate power up
- Flexible design due to size  
=> Ideal for point-of-use applications
- BUT... power conversion efficiency is (still) low  
=> High demands to reactor design

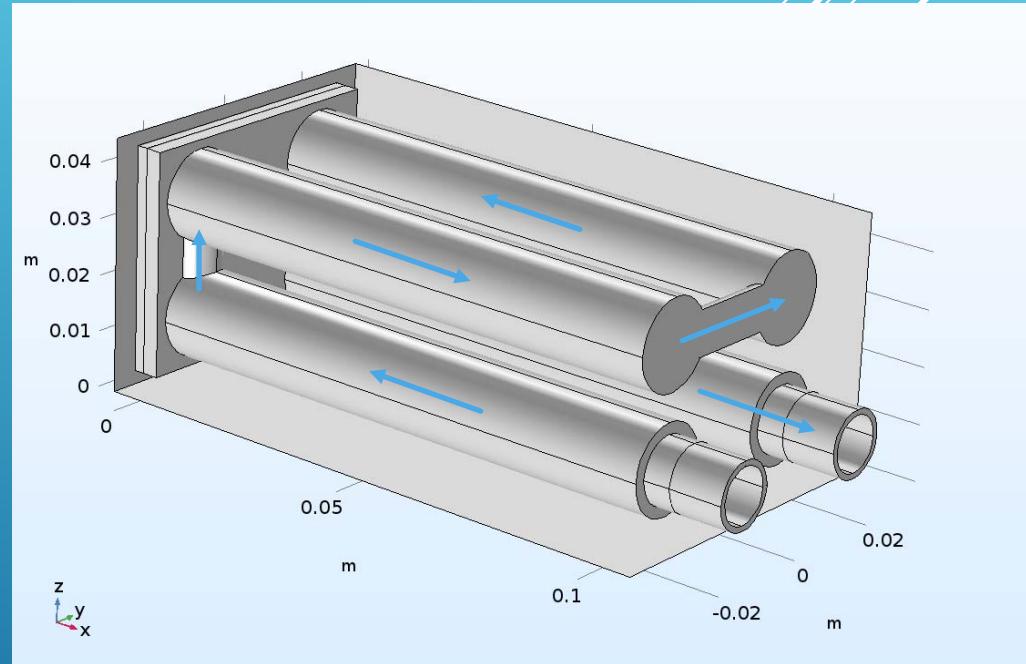

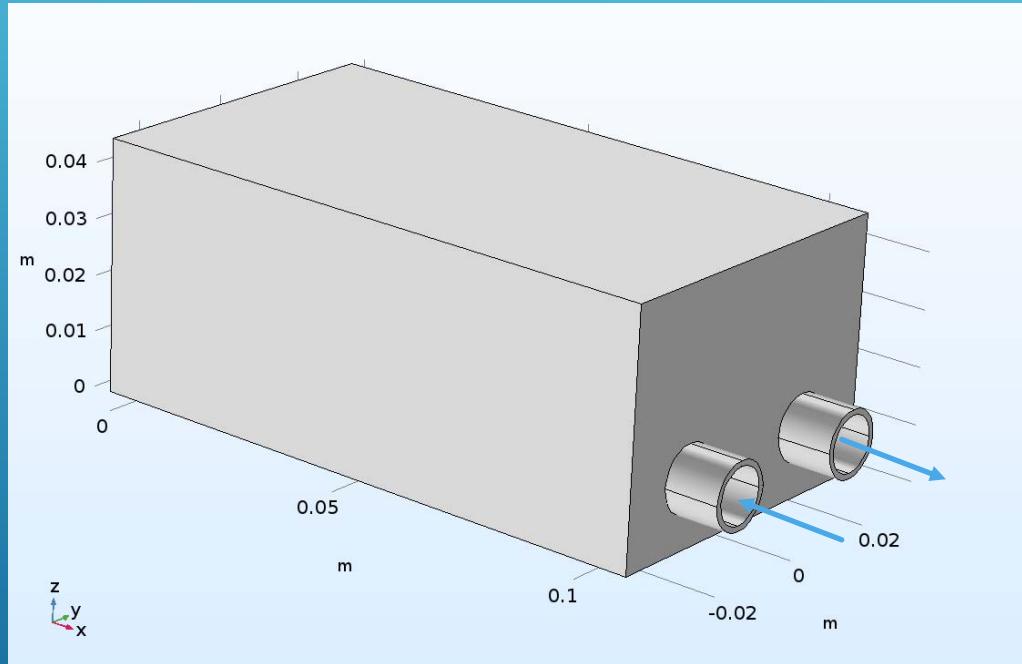

# REACTOR DESIGN AND TESTING

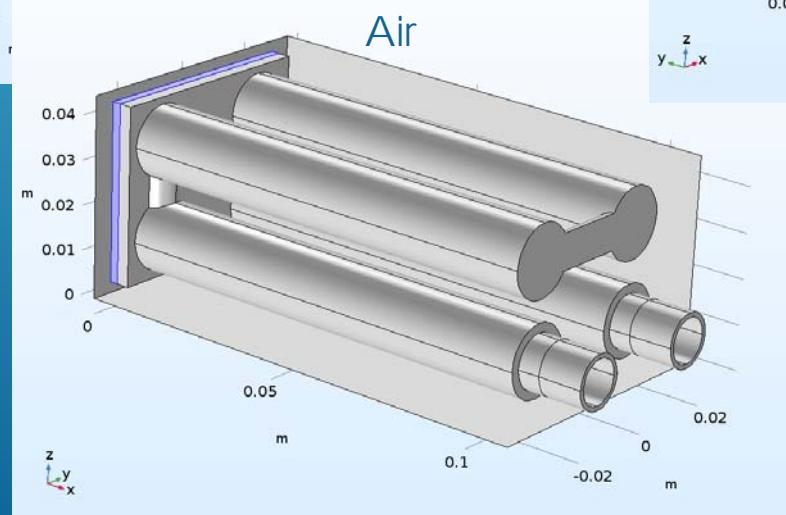

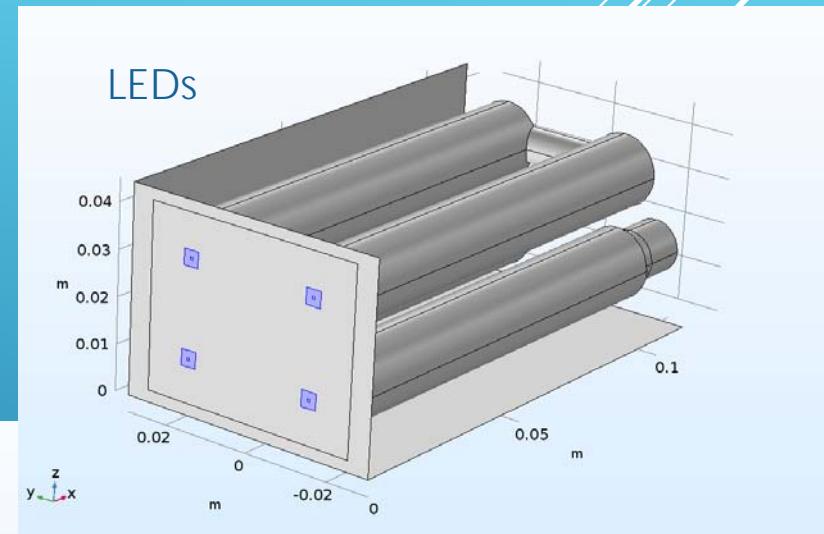

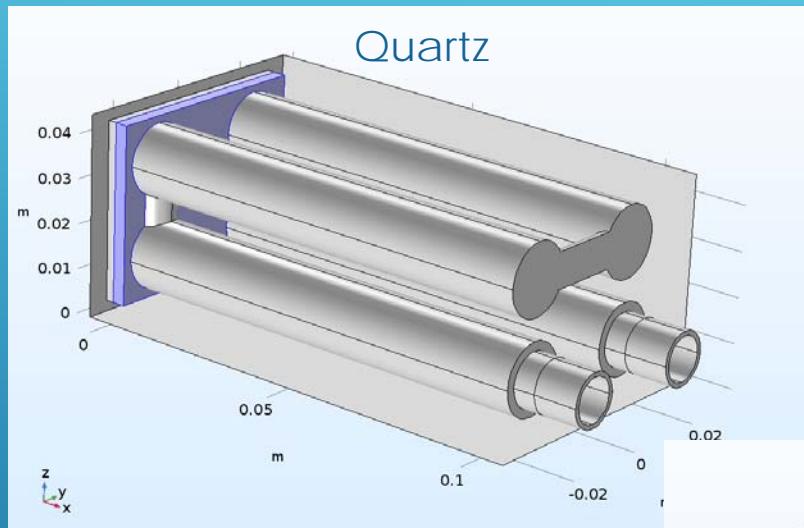

- Conventional design approach is physical prototyping and biological test
  - => Time consuming and expensive
- Virtual prototyping - faster and cheaper
- In the following – showcase models of the approach

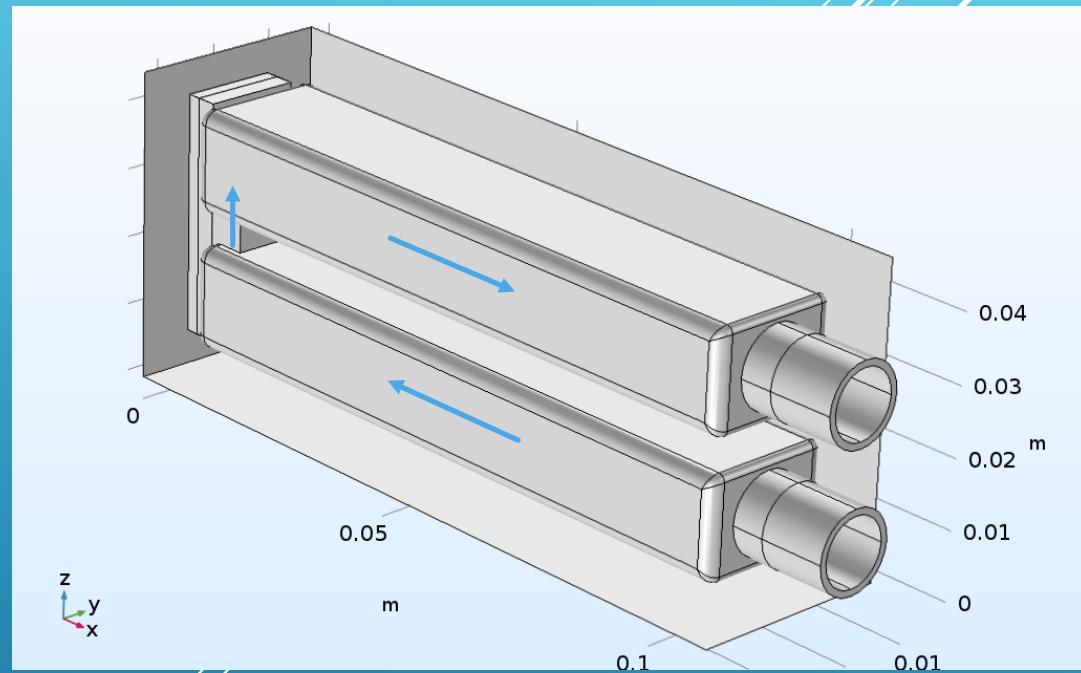

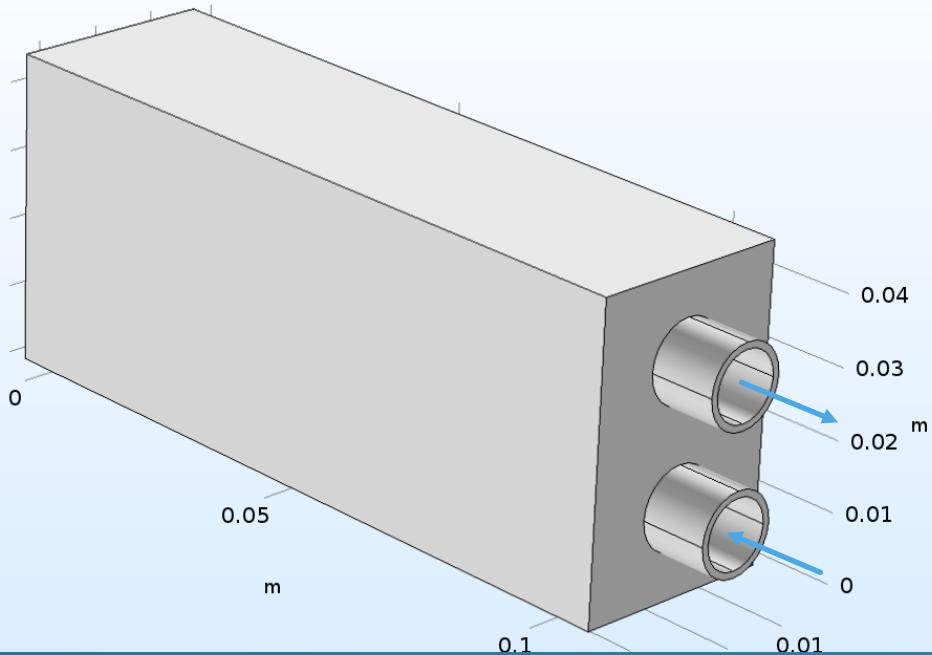

# SHOWCASE DESIGN - CYLINDRICAL

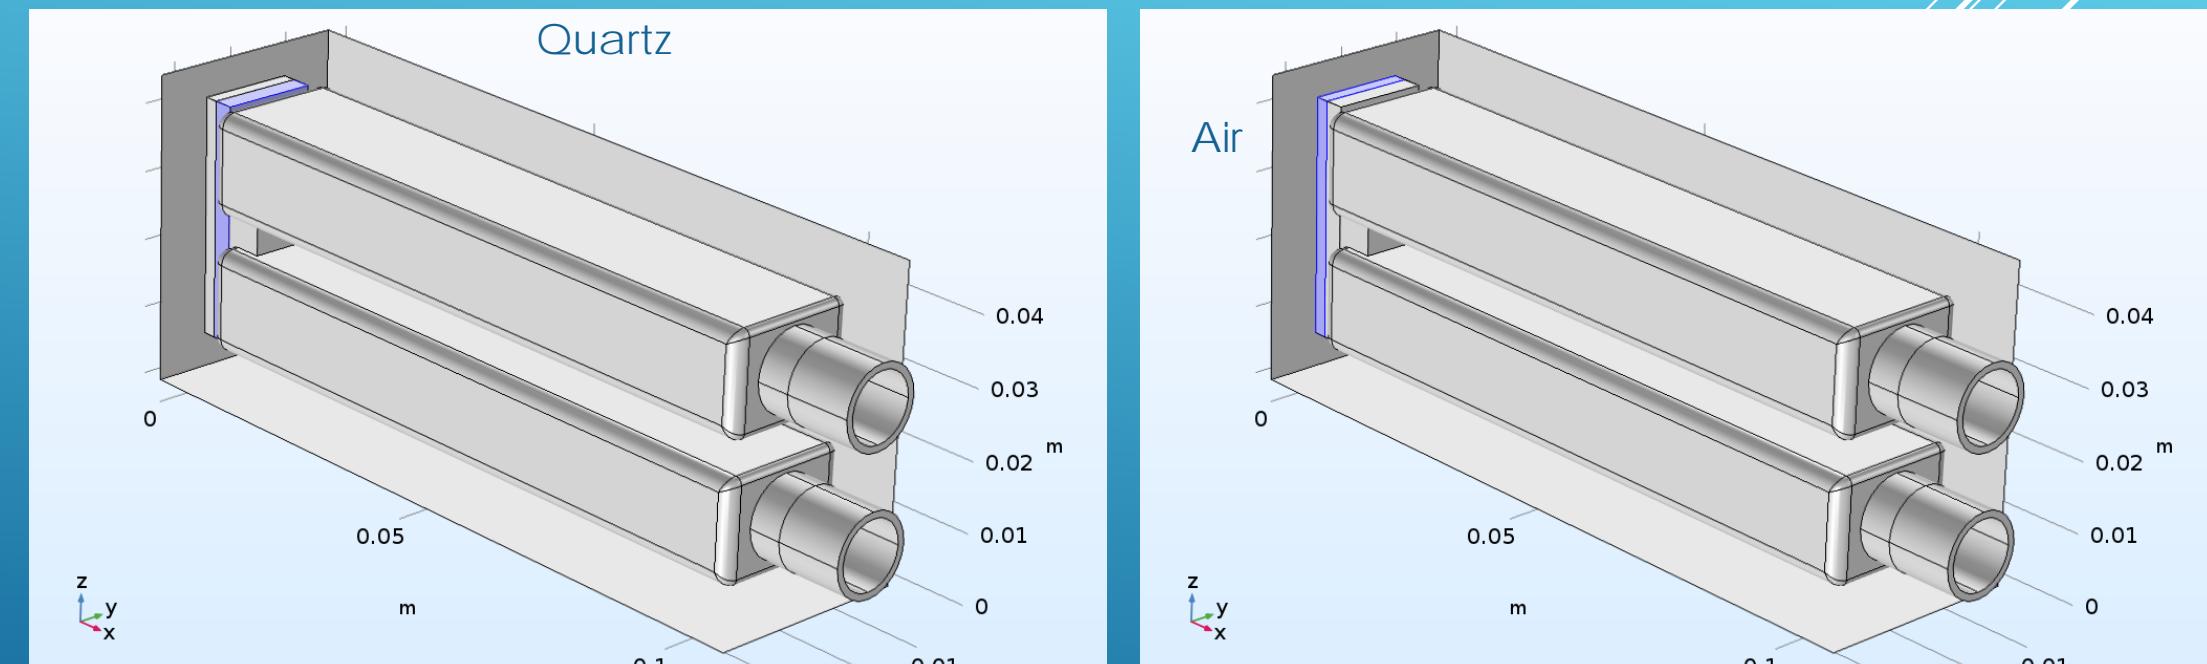

# SHOWCASE DESIGNS - CYLINDRICAL

# SHOWCASE DESIGNS - RECTANGULAR

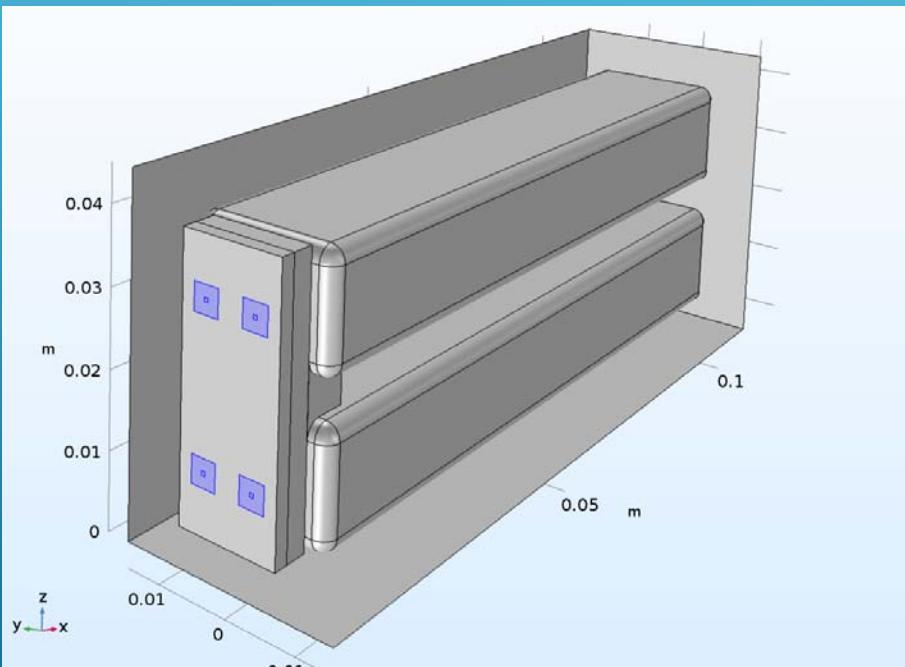

# SHOWCASE DESIGNS - RECTANGULAR

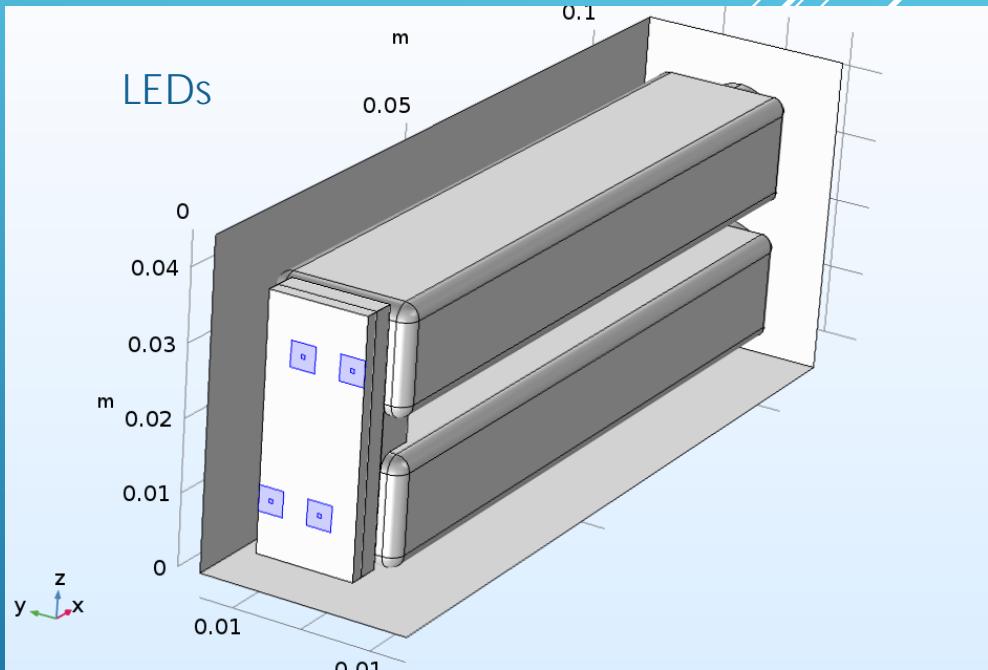

# SHOWCASE DESIGNS - RECTANGULAR

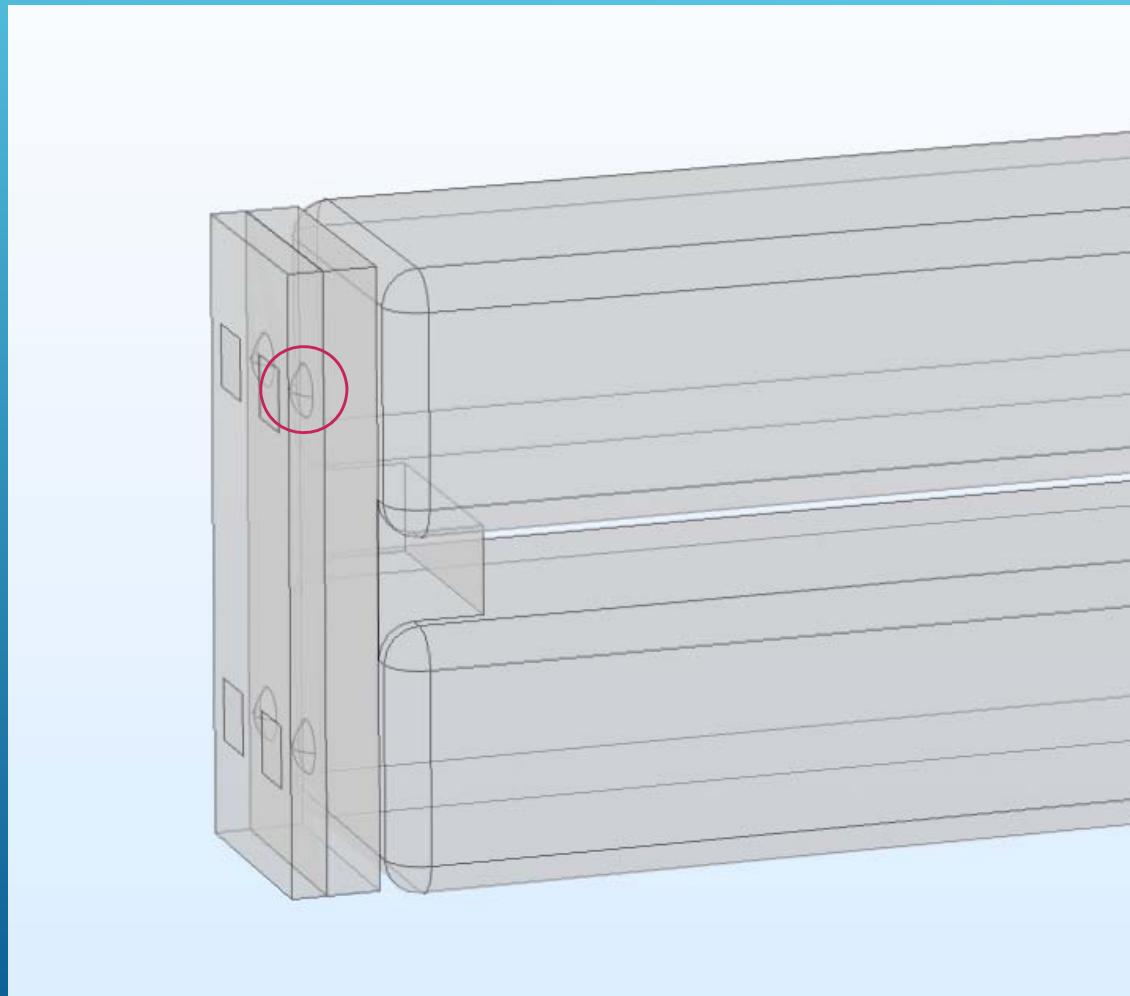

Symmetric position

Shifted position

## SHOWCASE DESIGNS - OPTICAL LENS

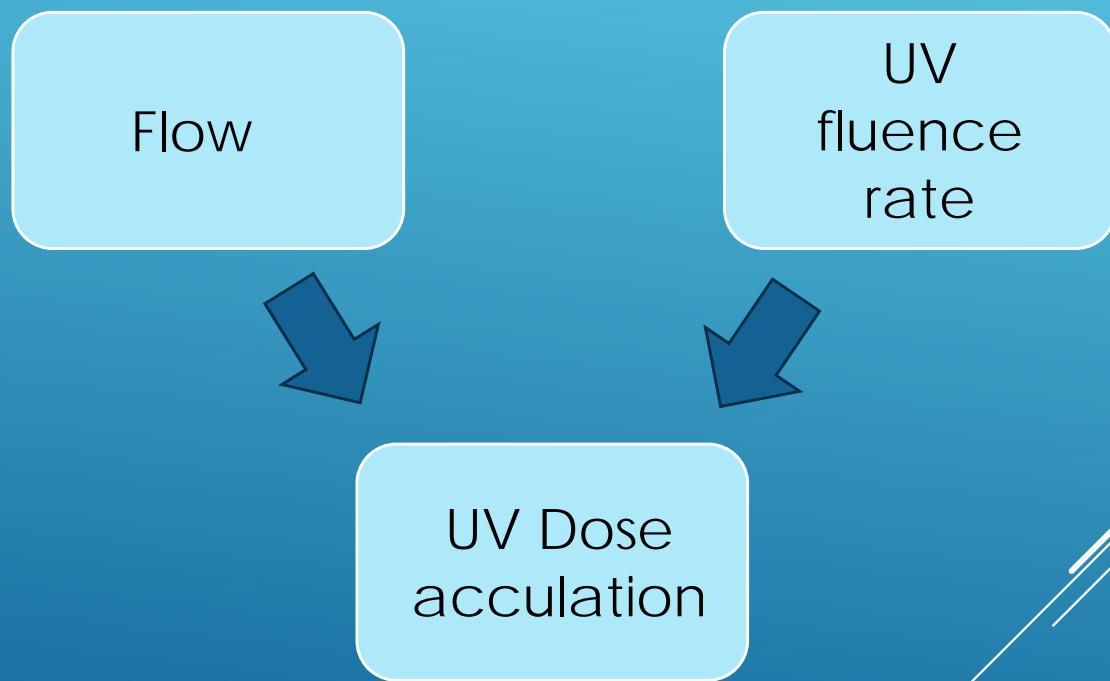

# MODEL SCENARIOS

Reactor	LED position	Surface	UVT	Optical lens
Rectangular	Symmetric	Non reflective	90%	No
Rectangular	Symmetric	Reflective*	90%	No
Rectangular	Symmetric	Non reflective	90%	Yes
Rectangular	Shifted	Non reflective	90%	No
Rectangular	Shifted	Reflective*	90%	No
Cylindrical		Non reflective	90%	No
Cylindrical		Reflective*	90%	No
Cylindrical		Reflective*	80%	No

\* 25% specular, 75% diffuse, R=0.95 (teflon)

# MODEL SETUP

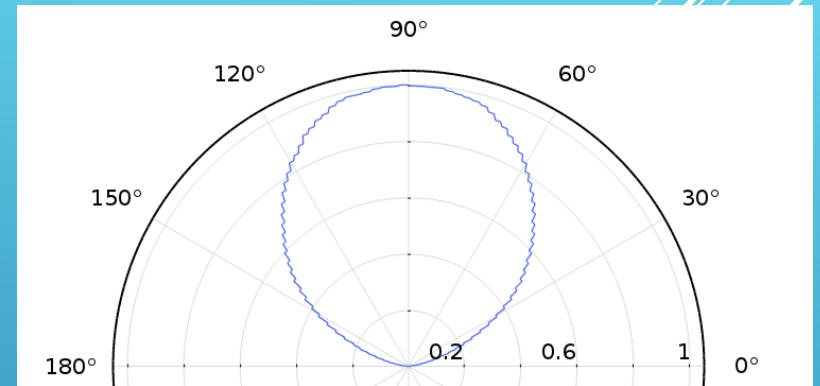

## MODEL SETUP - FLOW

- RANS k- $\varepsilon$  model
- No slip boundary condition
- 0.1 m extra inlet and outlet pipes
- Fully developed inlet flow condition
- Zero pressure outlet condition
- $Q= 60 \text{ L/h}$
- $T=20 \text{ }^{\circ}\text{C}$

# MODEL SETUP – UV FLUENCE RATE

- Ray tracing model (Geometrical optics)
- Refraction/reflection at interfaces
- LEDs considered point sources (35 mW, 265nm)
- Number of rays: 500.000 per LED
- Directional pattern obtained using photometric data import of ies file
- Fluence rate (F) is obtained using a domain accumulator

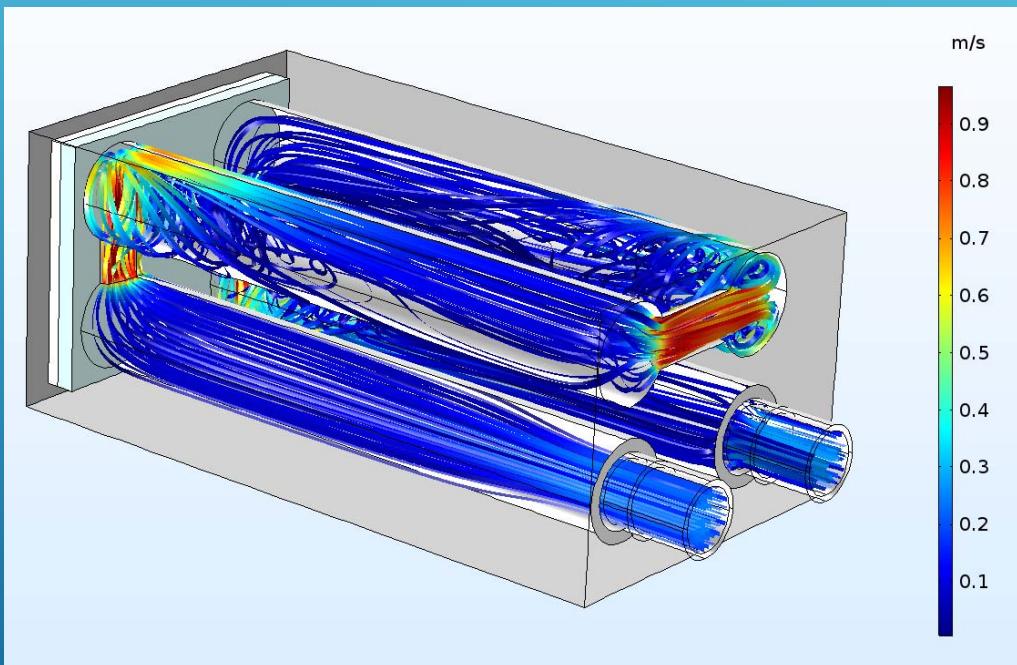

# MODEL SETUP – DOSE ACCUMULATION

- Particle tracing using 10.000 particles
- Particle size 1  $\mu\text{m}$  (density 1025 kg/m<sup>3</sup>)
- Density at inlet proportional to velocity magnitude
- Transported by the flow field using Stokes drag
- Wall bounce condition
- UV dose accumulated as  $D = \int F dt$

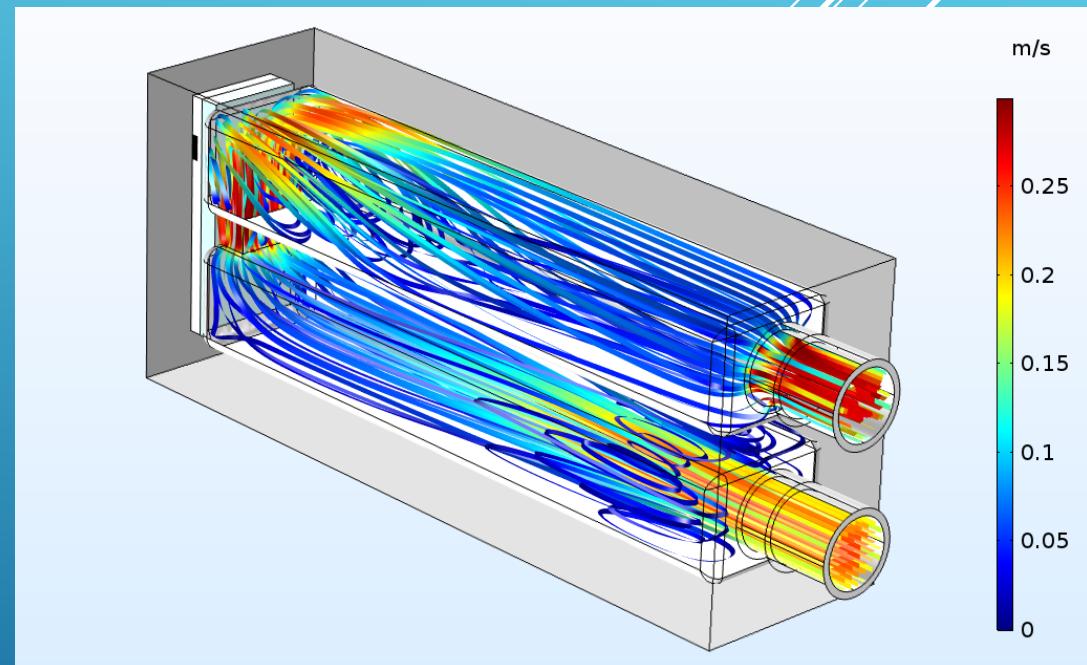

# FLOW PATTERN

Cylindrical

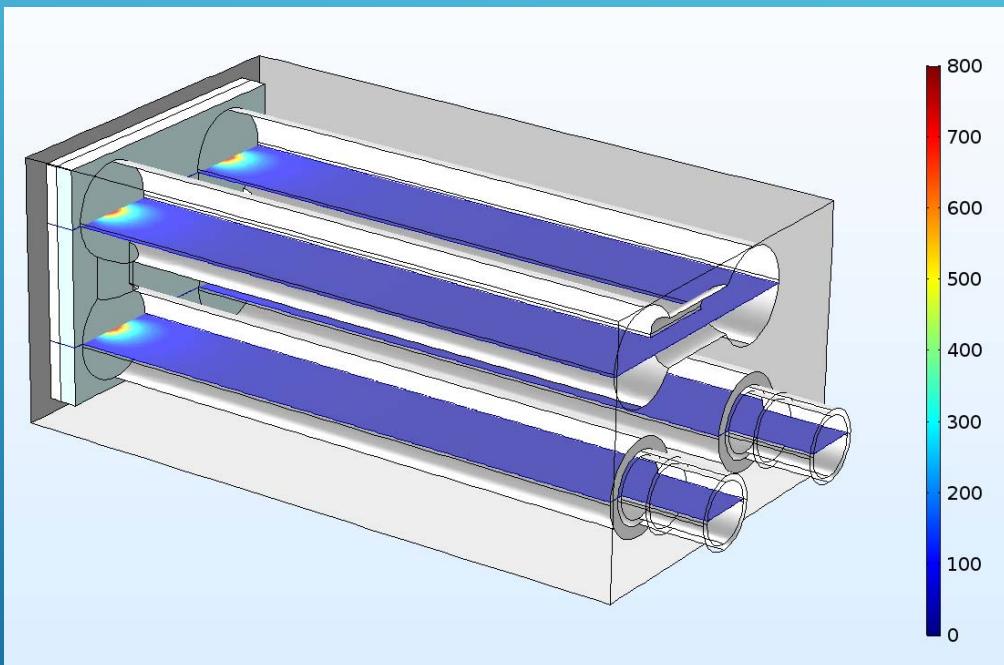

Rectangular

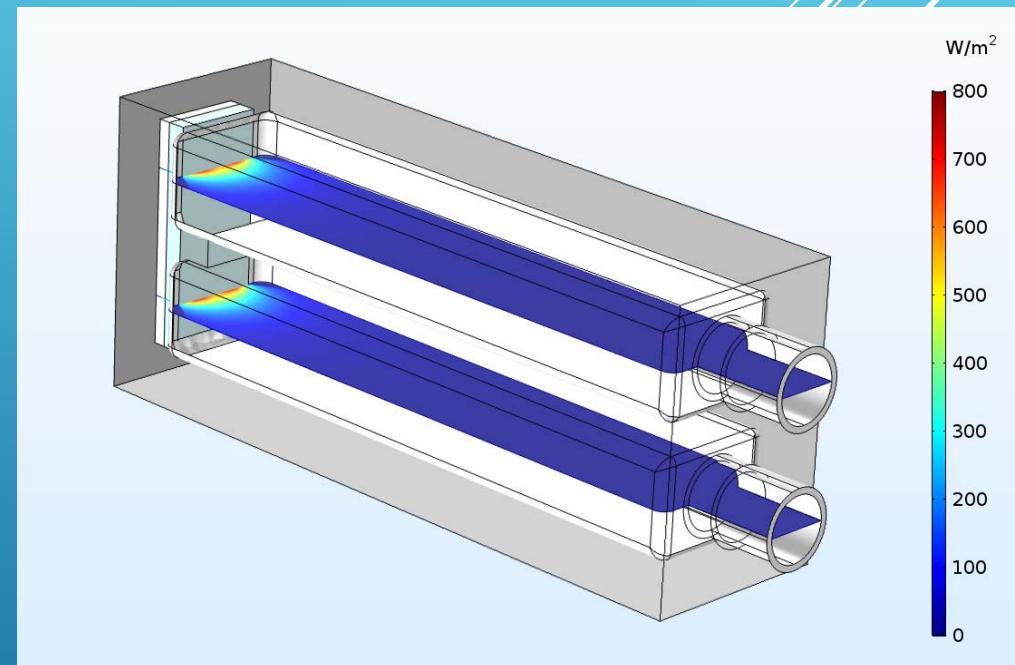

# UV FLUENCE RATE

Cylindrical non reflective

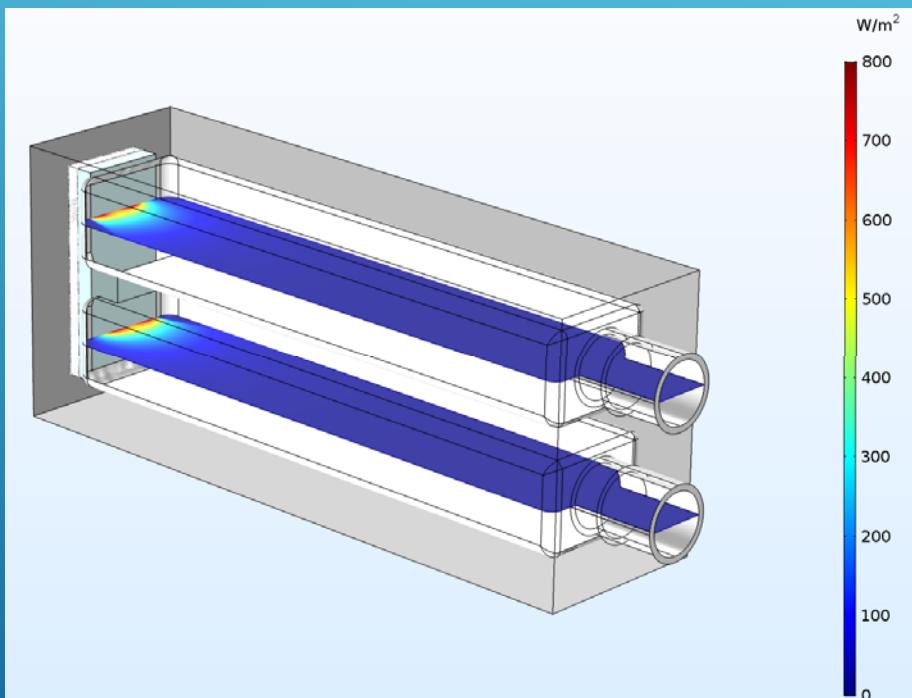

Rectangular (symmetrical) non reflective

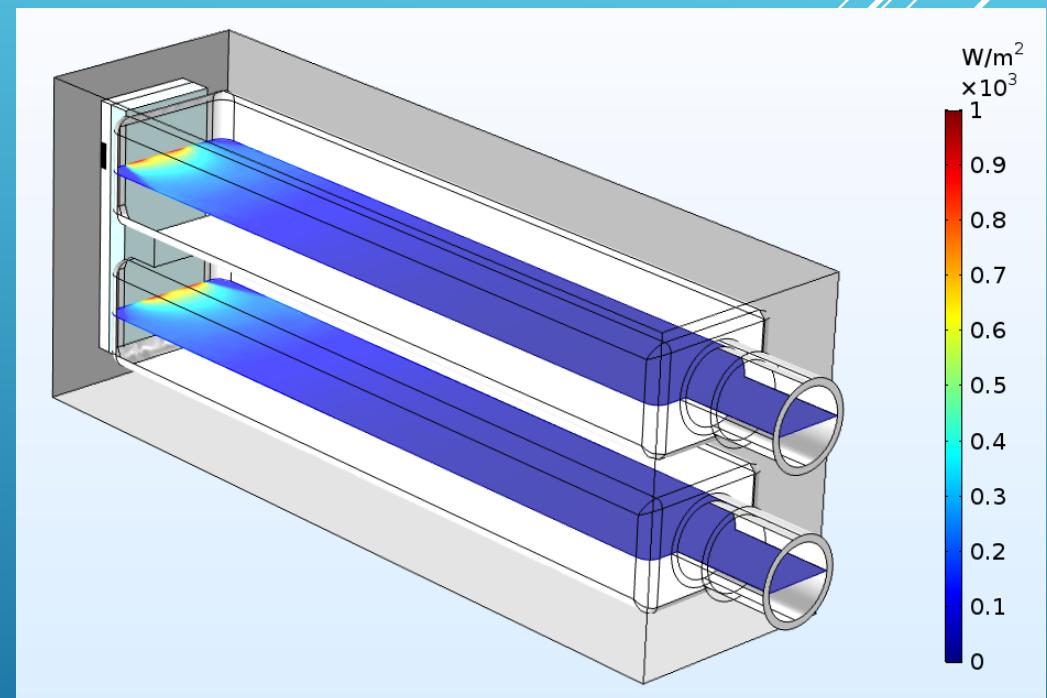

# UV FLUENCE RATE

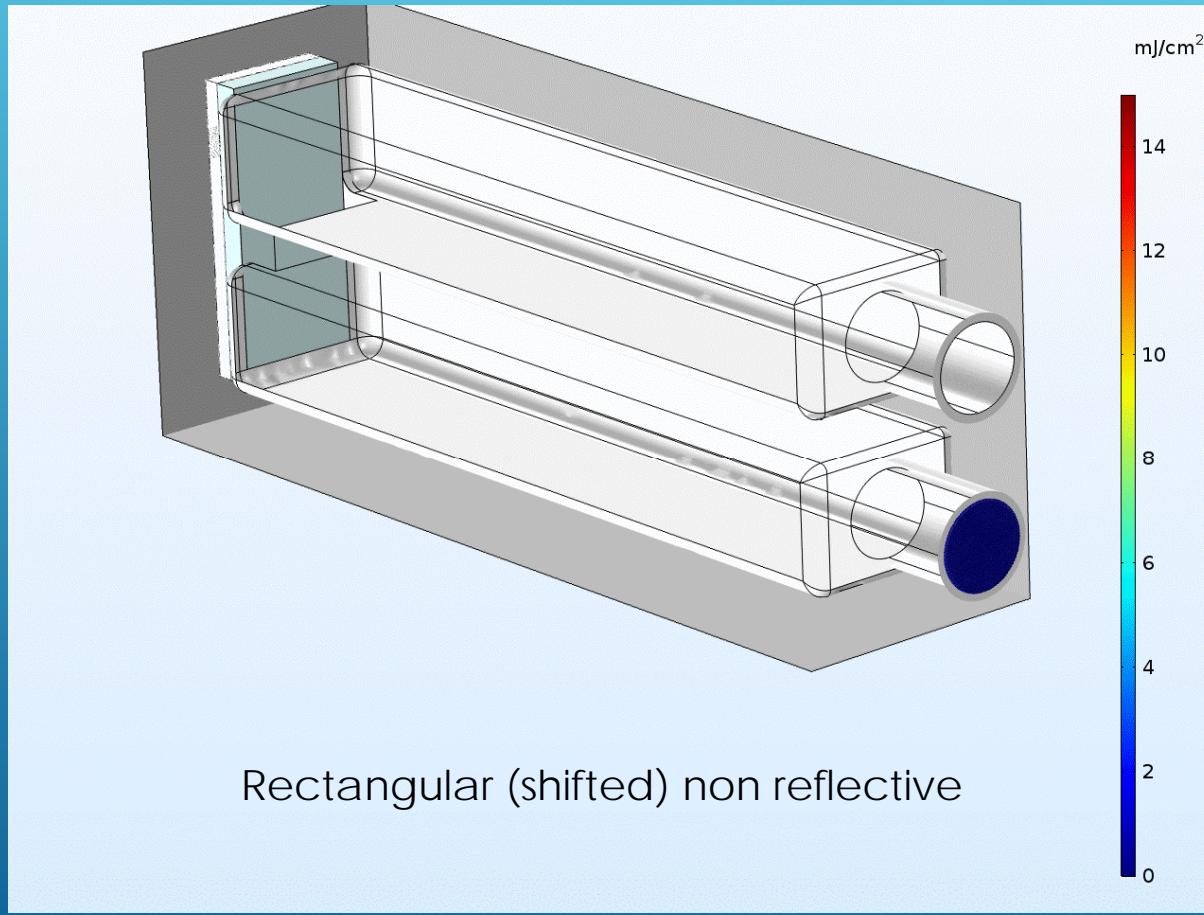

Rectangular (shifted) non reflective

Rectangular (shifted) reflective

# DOSE ACCUMULATION

# DOSE DISTRIBUTION

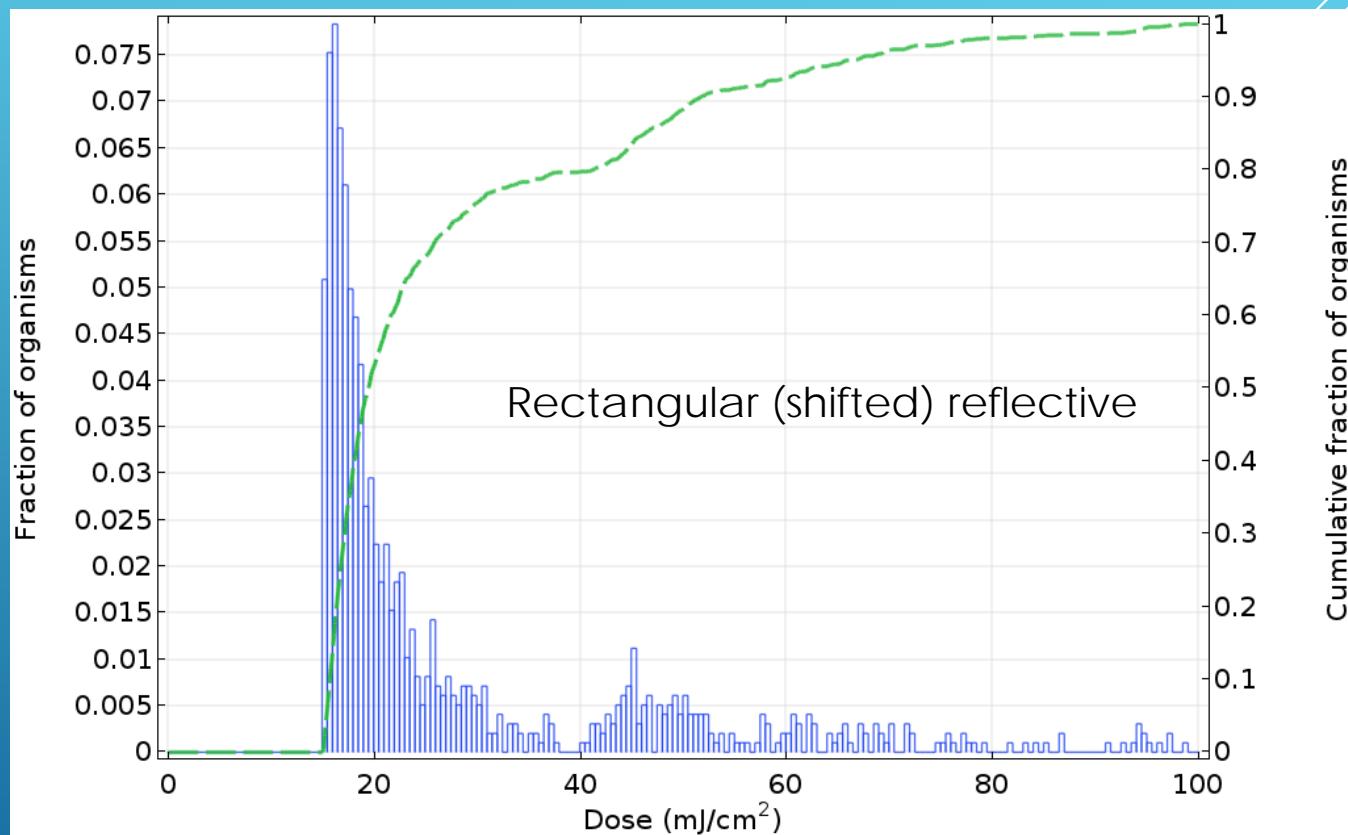

## 1<sup>st</sup> order inactivation

$$\frac{N}{N_0} = \exp(-kD)$$

$$\frac{N}{N_0} = \sum_i \exp(-kD_i)$$

## Reduction Equivalent Dose

$$RED = \frac{\ln\left(\frac{N}{N_0}\right)}{-k}$$

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

Reflective surfaces are important

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

Optical lenses can (partly) substitute reflective surfaces

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

UV transmittance of water is important

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

Shifted LED position outperforms the symmetrical

# REACTOR EFFICIENCY

Scenario	log I	RED [mJ/cm <sup>2</sup> ]
RECT-SYM- Non Reflective	1.66	7.19
RECT-SYM-Reflective	4.02	16.63
RECT-SYM-Non Reflective- Lens	2.48	10.26
RECT-SHIFT-Non Reflective	1.77	7.30
RECT-SHIFT-Reflective	4.32	17.85
CYL-Non Reflective-UVT90%	1.81	7.49
CYL-Reflective-UVT90%	5.85	24.21
CYL-Reflection-UVT80%	3.92	16.91

The cylindrical design outperforms the rectangular

# THANK YOU FOR YOUR ATTENTION
